

In today's fast paced and diverse workplace, the need for qualified people in the field that are trained in the basic essentials of safety and health, leadership, communication and regulatory requirements is great. The Safety Council's COSS program is a solution to the increasing need for qualified safety professionals.

The Certified Occupational Safety Specialist program is a unique curriculum-based certification providing accelerated learning in the essentials of safety, occupational health and OSHA training requirements. COSS graduates also receive the OSHA certification for 10-Hour General Industry and 10-Hour Construction safety training, a \$400.00 value.

What is a Certified Occupational Safety Specialist (COSS)?

A person in the safety and health field that coordinates the successful implementation of corporate safety and health plans, coordinates and maybe even conducts safety and health training, and provides support to safety and training managers.

What can I expect to learn in the COSS class?

The COSS Program has no prerequisites for entering, therefore, in each class we tend to have a mix of non-experienced safety persons, as well as safety professionals who have been in the safety field for 20+ years. But, we have learned that regardless of the number of years of experience our students have in safety, everyone leaves the COSS class with a wealth of knowledge!

Upon Successful Completion:

After successfully completing the COSS Course, you will be designated as a Certified Occupational Safety Specialist (COSS). A COSS is a person in the safety and health field that coordinates the successful implementation of corporate safety and health plans, coordinates and maybe even conducts safety and health training, and provides support to safety and training managers.

COSS Graduates Benefit From:

- Greater recognition
- Greater earning potential
- Networking with industry professionals
- Increased job security
- Achieving certifications 60% faster than similar programs
- COSS Alumni membership
